

**Custom Chiropractic  
3950 W. Ray Rd Ste 2  
Chandler, AZ 85226**

I, \_\_\_\_\_, authorize the performance upon myself of the following procedures: Chiropractic manipulation, hot/cold packs, electrical muscle stimulation, exercise therapy, stretching, spinal traction, massage, infrared, and nutritional advice to be performed by or under Que Karbassy D.C.'s supervision, or his designated employees, as clinically indicated.

I consent to the performance of other diagnostic and therapeutic procedures in addition to or different from those stated above, whether or not arising from presently unforeseen conditions that Dr. Karbassy may consider necessary or advisable in the course of my health care.

Dr. Karbassy and/ or his associates and assistants have explained the nature and purpose of the procedures, possible alternatives, the risks involved, the possible consequences, the risks involved, the possible consequence, and the possibility of complications to me.

While rare, some patients may experience short term aggravation of symptoms, rib fractures or muscle and ligament strains or sprains as a result of manual therapy techniques. There are reported cases of stroke associated with many common neck movements including adjustment of the upper cervical spine. Present medical and scientific evidence does not establish a definite cause and effect relationship between upper cervical spine adjustment and the occurrence of stroke. Furthermore, the apparent association is noted very infrequently. However, you are being warned of this possible association because stroke sometimes causes serious neurological impairment, and may on rare occasion result in injuries including paralysis. The possibility of such injuries resulting from upper cervical spinal adjustment is extremely remote. There are rare reported cases of disc injuries following cervical and lumbar spinal adjustment. The risk of injuries or complications from chiropractic treatment is substantially lower than that associated with many medical or other treatments, medications, and procedures given for the same symptoms

This office utilizes an "open-adjusting" environment for ongoing patient care. "Open adjusting" involves several patients being seen in the same adjusting room at the same time. Patients are within sight of one another and some ongoing routine details of care are discussed within earshot of other patients and staff. This environment is used for ongoing care and this is NOT the environment used for taking patient histories, providing examinations or presenting report of findings. These procedures are completed in a private, confidential setting. The use of this format is intended to make your experience with our office more efficient and productive as well as to enhance your access to quality health care and health information. If you choose not to be adjusted in an open-adjusting environment, please inform Dr. Karbassy or his staff and other accommodations will be made for you.

I acknowledge that no guarantee or assurance of the results that may be obtained from the procedure has been given by Dr. Karbassy, his associates and assistants.
